PERSONAL PROJECTS & TOOLS

NEXUSSEO - SEO & MARKETING TOOLKIT

- Developing and testing a toolkit for SEO and digital marketing, intended to bring multiple SEO tasks into one platform. Features researched or implemented include:
- Website crawler; URL status checker; redirect checker; title and meta description audits; sitemap analysis.
- Robots.txt checker; SSL checker; indexability analysis; keyword rank tracking; Search Console data.
- Keyword research; SERP data integration; data export and reporting.

Technologies: Python, APIs, HTML/CSS/JavaScript, Google Search Console API, SERP APIs, and related data sources

WEBSITE MIGRATION & SEO AUTOMATION

Developed workflows to support:

- Crawling and categorizing URLs; comparing URLs between old and new websites; mapping 301 redirects.
- Detecting URLs without matching destination pages; classifying posts, pages, categories, tags, and other content types.
- Checking redirects and indexability; identifying problematic URLs; consolidating data and reporting through Google Sheets.

PRODUCT DATA AUTOMATION

Designed workflows to support large-scale product data processing:

- Standardizing product names; generating SEO titles; normalizing URL slugs; developing product descriptions.
- Mapping featured images and product galleries; standardizing import-ready data.
- Processing data with Google Sheets and scripts; supporting website and e-commerce import/export workflows.

AI-ASSISTED MARKETING WORKFLOWS

Researching and testing AI/LLM applications in the following workflows:

- Content generation and enrichment; SEO content and product content creation.
- Keyword analysis, data processing, marketing automation, and workflow automation.

Exploring connections across AI -> APIs -> Google Sheets/Drive -> Internal Tools -> Websites/E-commerce Platforms to reduce manual marketing tasks and build scalable workflows.
